How Did the Fund Perform Last Year?

Bitcoin & Ether Equal Weight ETF (the "Fund") seeks investment results, before fees and expenses, that correspond to the performance of an equal weight basket of bitcoin and ether. The Fund invests in financial instruments that the Advisor believes, in combination, should produce daily returns consistent with the Fund's investment objective. Bitcoin's returns were driven in part by geopolitical uncertainty and rising government debt, boosting the appeal of this "digital gold" with no tie to nation-states. Ether returns experienced weakness during the period in part due to developing competition from alternative coins. For the year ended May 31, 2025, the Fund had a total return of -1.06%. Primary factors affecting Fund performance include the total return of the derivatives held by the Fund, including the performance of the reference assets to which any derivatives are linked, expenses, transaction costs, and other miscellaneous factors.
