How Did the Fund Perform Last Year?

Ultra MSCI EAFE (the "Fund") seeks daily investment results, before fees and expenses, that correspond to two times (2x) the daily performance of the MSCI EAFE Index (the "Index"). The Fund invests in financial instruments that the Advisor believes, in combination, should produce daily returns consistent with the Fund's investment objective. For the year ended May 31, 2025, the Fund had a total return of 15.47% and an average daily statistical correlation of over 0.99 to twice that of the return of the Index. For the same period, the Index had a total return of 13.33% and a volatility of 16.79%. The Index performance was driven by a protracted period of European underperformance relative to the U.S. that was broken in 2025 driven by prospects of policy reform and the end of fiscal austerity in Europe. Primary factors affecting Fund performance include the total return of the derivatives held by the Fund, the performance of the reference assets to which any derivatives are linked, financing rates paid or earned, expenses, transaction costs, the volatility of the Fund's Index (and its impact on compounding), and other miscellaneous factors.
