How Did the Fund Perform Last Year?

Short Real Estate (the "Fund") seeks daily investment results, before fees and expenses, that correspond to the inverse (-1x) of the daily performance of the S&P Real Estate Select Sector Index (the "Index"). The Fund invests in financial instruments that the Advisor believes, in combination, should produce daily returns consistent with the Fund's investment objective. For the year ended May 31, 2025, the Fund had a total return of -7.37% and an average daily statistical correlation of over 0.99 to the inverse of the return of the Index. For the same period, the Index had a total return of 13.74% and a volatility of 18.17%. The Index performance was driven by factors such as a post liberation day rally that helped the real estate sector shrug off higher interest rates and preserve gains from 2024. Primary factors affecting Fund performance include the total return of the derivatives held by the Fund, the performance of the reference assets to which any derivatives are linked, financing rates paid or earned, expenses, transaction costs, the volatility of the Fund's Index (and its impact on compounding), and other miscellaneous factors.
